The Able Trust

The Able Trust is also known as the Florida Endowment Foundation for Vocational Rehabilitation. The Able Trust is a public-private partnership foundation established by the Florida Legislature in 1990 to be the direct support organization (DSO) for the Department of Education, Division of Vocational Rehabilitation (FDOE/VR). The Able Trust supports the FDOE/VR in their efforts to help Floridians with disabilities of all ages enter the workforce.

The Able Trust provides the Annual Census Update to FDOE/VR, partners, the non-profit community, and others who are engaged in helping people with a disability of all ages create a path to employment. The Able Trust updates the data report annually.

Introduction

The Annual Census Update uses Census Bureau data to provide an overview of Floridians with disabilities. Key demographics highlighted in this report include changes in the population of Floridians with disabilities, educational attainment, employment, and differences in labor force participation. County-level information is included to illustrate how the population of persons with disabilities varies across the state as well as illustrating median income and employment levels.

A strong workforce that includes Floridians with disabilities continues to be crucial as Florida's population grows. To be successful, all Floridians must have the opportunity to develop skills for a workforce that is becoming increasingly complex. Through a unique combination of research, outreach, and capacity building, The Able Trust works to strengthen our current workforce system to ensure more Floridians with disabilities have opportunities to enter the job market.

Through The Able Trust's youth programs, we are working with partners in communities across Florida to help students with disabilities. The Able Trust programs help students develop soft skills that are important to employers, and ensure they have the opportunity to learn about postsecondary and employment options as they plan for the future.

About the Data

This report uses U.S. Census Bureau's American Community Survey (ACS) data. The questions asked by the Census Bureau to determine this data are available in Appendix 1. Respondents are not required to disclose if they have a disability – all responses are voluntary.

The data reported here are the 5-year averages, with 2022 being the most recent available. That data is compared to the previous 5-year averages in the report. Due to issues collecting data during the COVID pandemic, the Census Bureau has issued statements about the reliability of the 2020 1-year data. That data was released later than usual as an experimental data set because of those data collection issues.

Note all the following data should be considered estimates, as they are estimated from a sample of U.S. households. Therefore, they all have margins of error (MOE). For example, the 2022 estimate of 2,875,501 Floridians who have a disability has a margin of error of plus or minus 15,846. The margin of error is 0.551 percent of the estimate. It is typical that the ACS 5-year estimates for 2020 and later have slightly larger margins of error than the previous reports. That is because of difficulties in surveying people during the COVID pandemic. Previous ACS estimates use smaller margins of error. For example, the 2019 estimate of 2,768,155 has a margin of error of plus or minus 11,867. That represents a 0.428 percent margin of error. Each year's estimates have differing margins of error, as can be seen when looking at the ACS data from the U.S. Census Bureau.

The ACS uses a 90 percent confidence interval for their estimates. This means that there is a 90 percent probability that the actual number of Floridians with a disability in the 2022 5-year average is between 2,859,655 and 2,891,347. It is important to note estimates of Floridians with disabilities are much greater when using the Center for Disease Control (CDC) definition (1 in 4 Americans) and the National Institute for Health (NIH) estimate of Americans with a diagnosable mental health disorder (also 1 in 4 Americans).

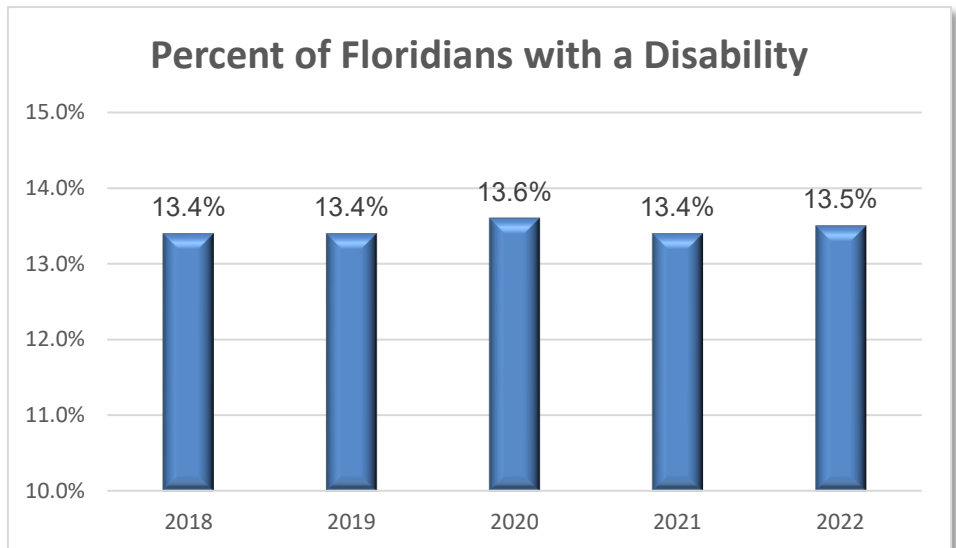

Floridians with a Disability

In Florida, the latest data available shows there are an estimated 2,875,501 Floridians who indicate they have a disability. That is 13.5 percent of Florida's population, which compares to 12.9 percent of the U.S. population who have a disability.

In the population who are 18 to 64 years of age, the most likely group to be in the workforce, there are 1,265,090 Floridians who have a disability. This number may be low due to the fact that people who have a disability do not always disclose their disability.

We know from the data that the number of Floridians is increasing, and the number of Floridians with a disability also increased.

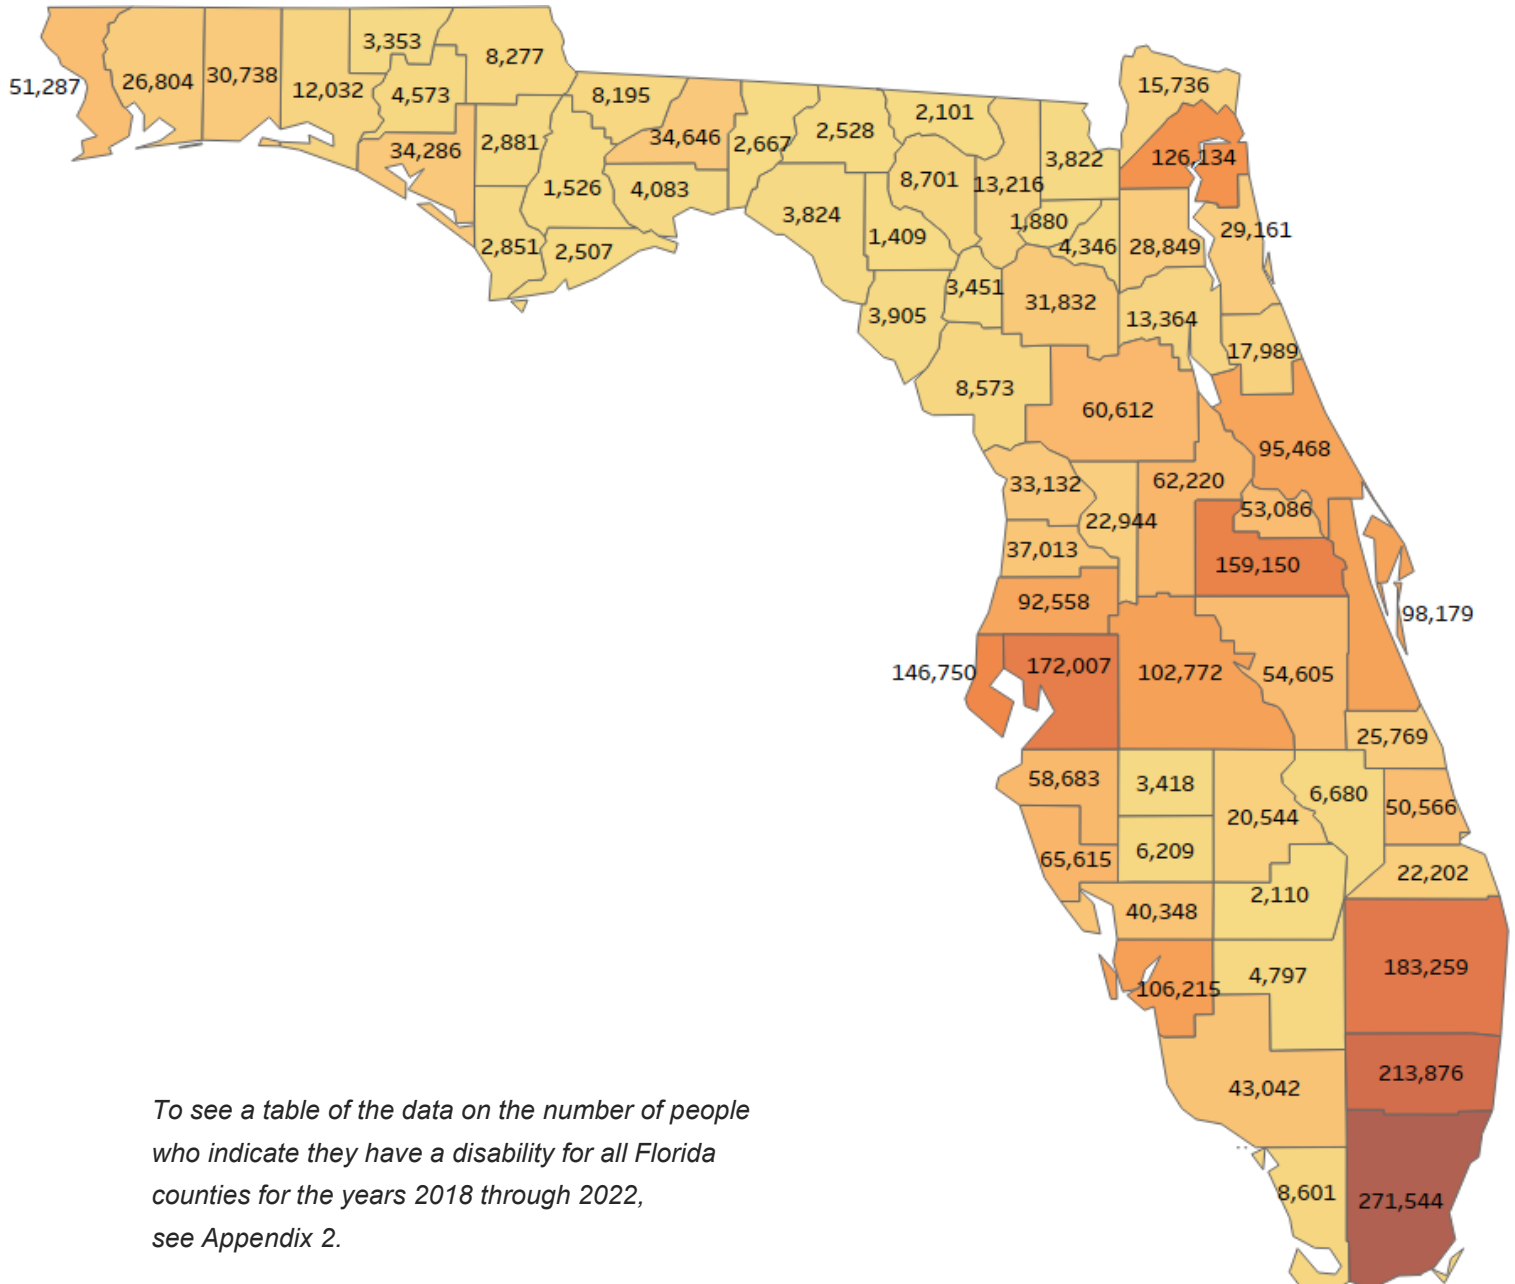

You can see that since 2018, the percent of Floridians with a disability went from 13.4 percent to 13.6 percent in the 2020 data, fell back to 13.4 percent with the 2021 data, and increased to 13.5 percent with the 2022 data.

Where Floridians with a Disability Live

The heat map below shows Florida's 67 counties and the number of persons with a disability who live in each one. In this map, darker colors indicate counties which have larger numbers of Floridians with a disability. The five counties with the largest number of people with disabilities are Miami-Dade, Broward, Palm Beach, Hillsborough, and Orange.

Number of People in Florida with a Disability, by County

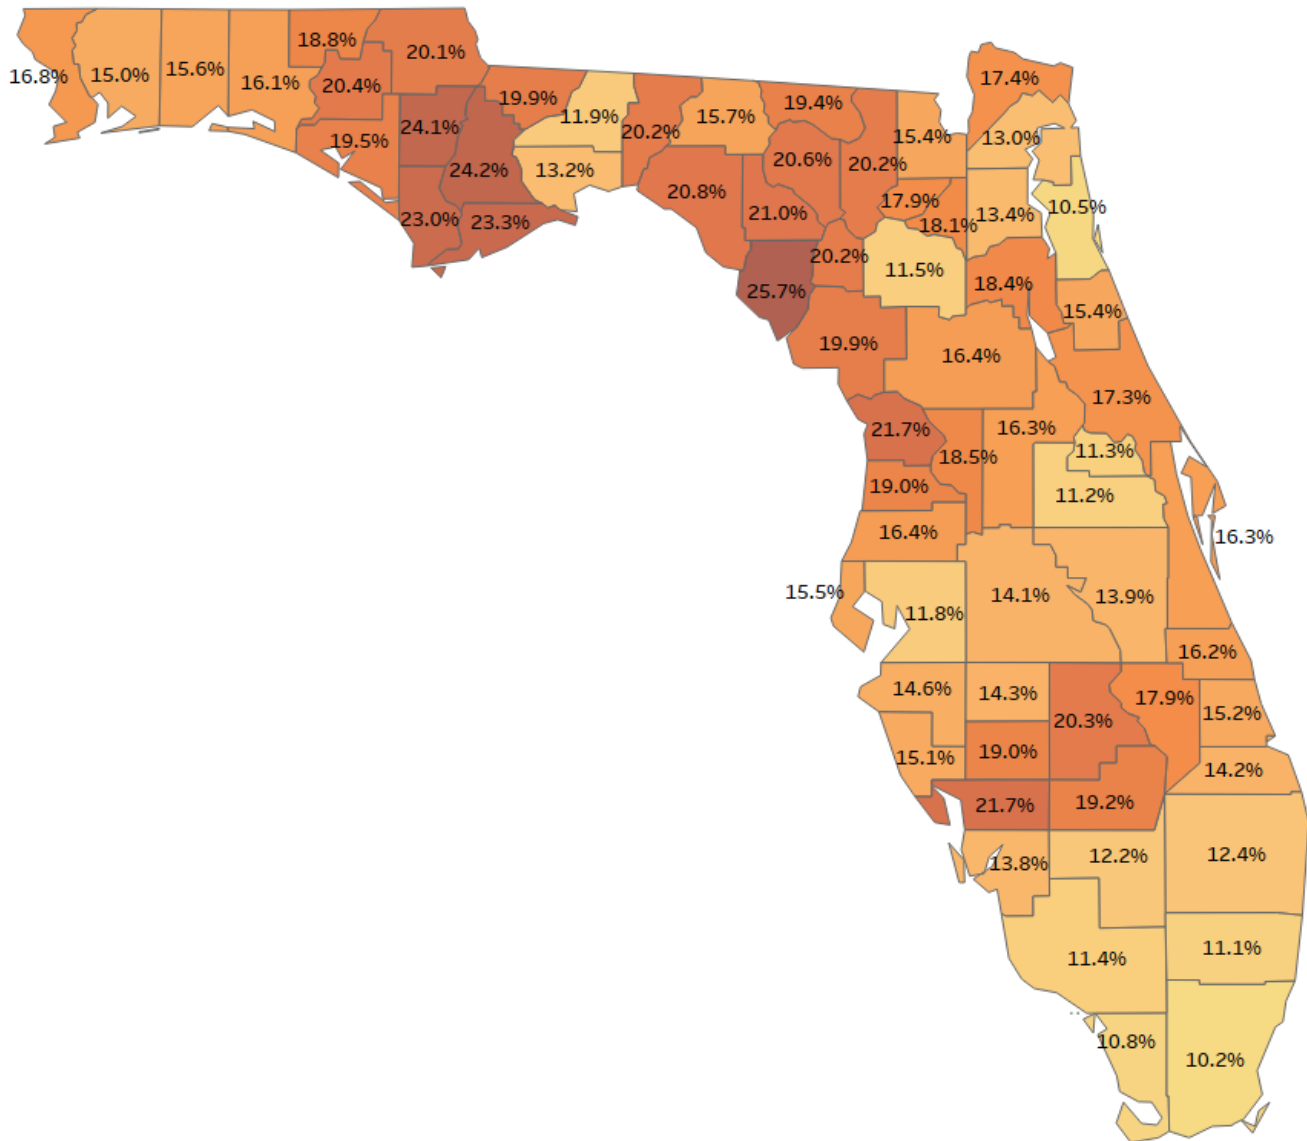

To see a table of the data on the number of people who indicate they have a disability for all Florida counties for the years 2018 through 2022, see Appendix 2.

Differences between Florida Counties

In 2021, 80.2 percent of [the U.S. population](#) lived in urban areas while less than 20 percent lived in rural areas. When comparing the percentage of people with disabilities in each of these areas, rural residents were more likely to have a disability -- 12.6 percent in urban areas versus 14.7 percent in rural areas.

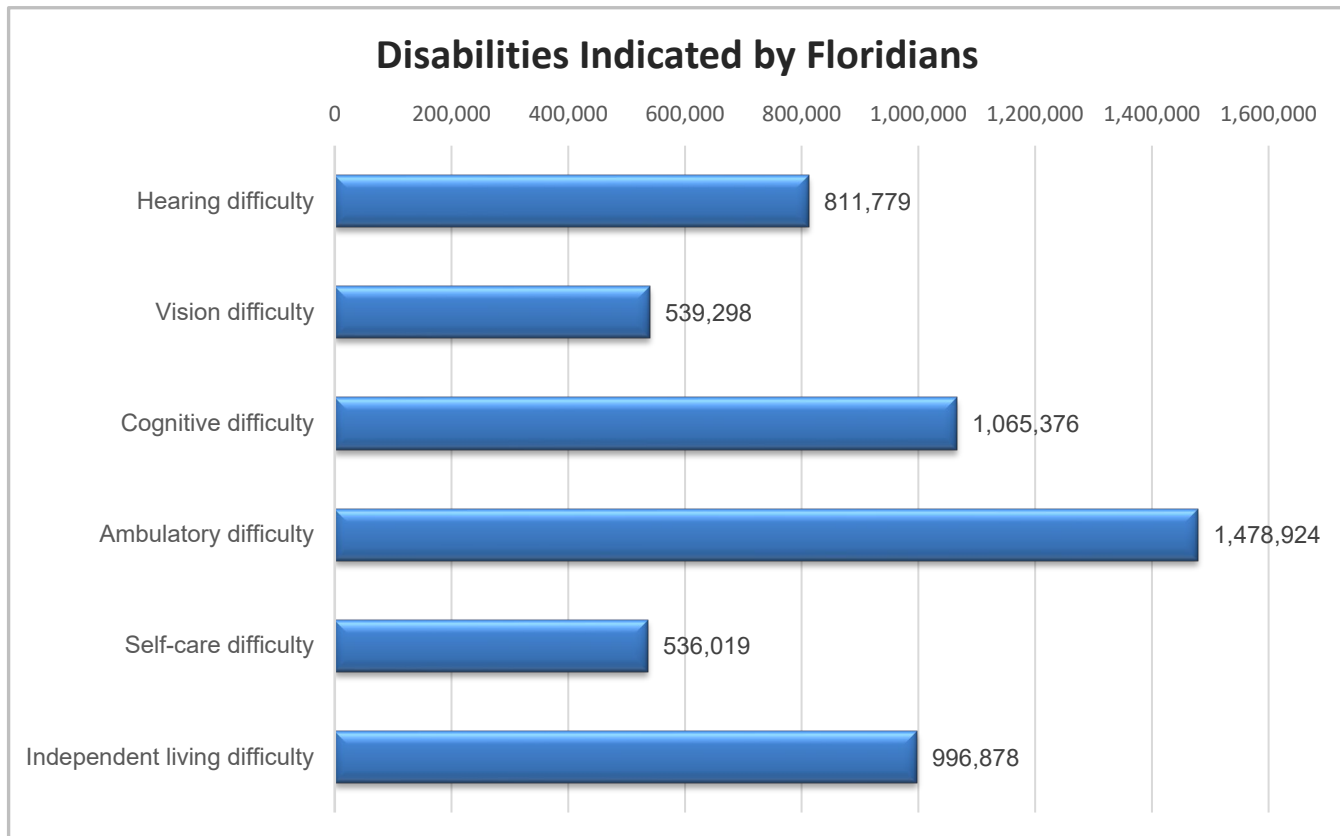

When we look at Florida's numbers as a percentage of the population, we also see that rural counties have a higher share of their population with a disability than more populated counties. Those percentages are shown in the map below; counties with a higher percentage of persons with disabilities include Dixie, Liberty, Calhoun, Franklin, and Gulf.

Percent of Population with a Disability, by County

Type of Disability Disclosed

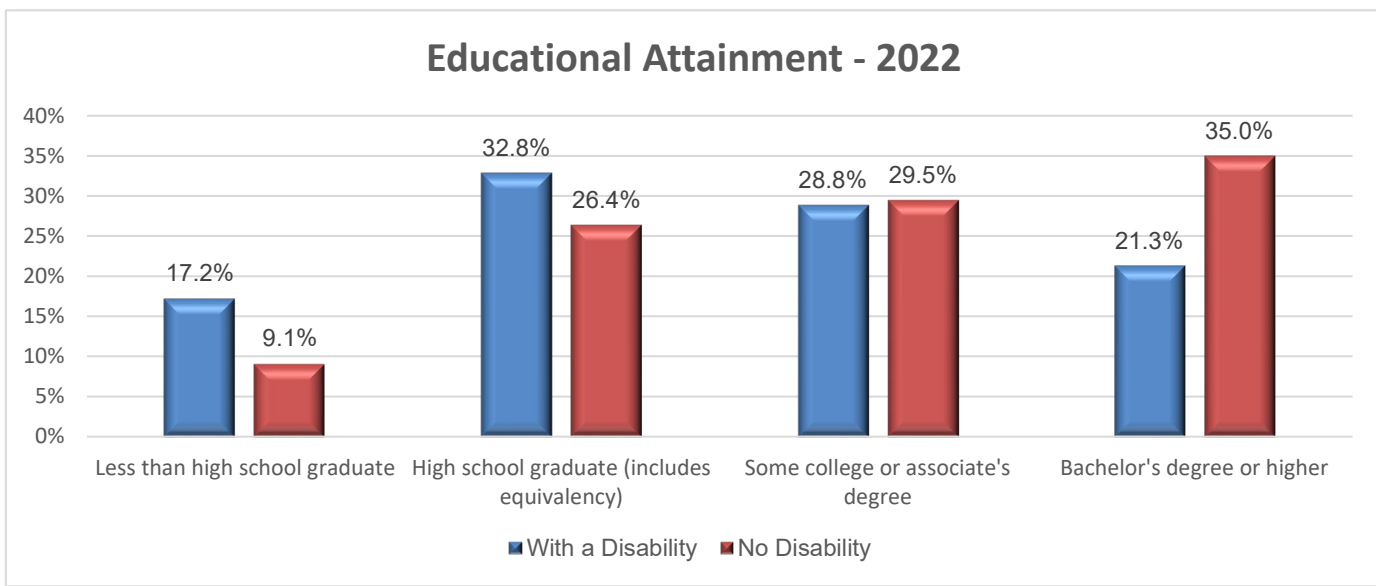

According to the [Pew Research Center](#), the most common types of disability in the U.S. involve difficulties with walking, independent living or cognition. These findings are consistent for Florida and the chart below shows the numbers of people in Florida who have differing types of disabilities. It is clear many Floridians have more than one type of disability.

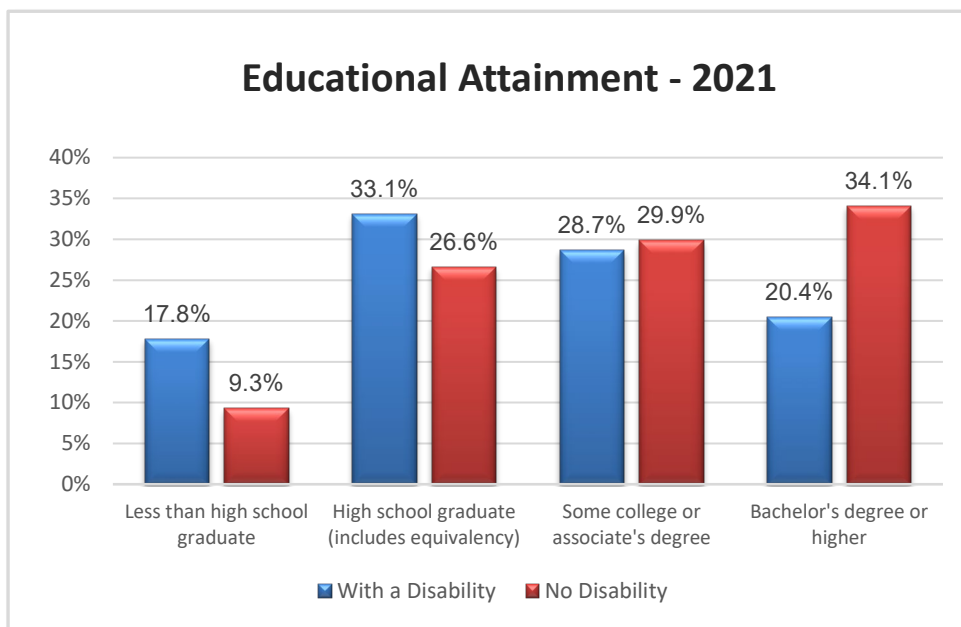

Differences in Educational Attainment

The transition from high school into postsecondary education represents opportunities for many students, but it may be more challenging for students with disabilities. When we look at the educational attainment of Floridians with a disability and those without a disability, there are significant differences.

As indicated in the first chart below, the group with a disability has a lower educational attainment level than the group with no disability. For the group with a disability, fully 50.0 percent have a high school degree or less, with only 21.3 percent attaining a bachelor’s degree or higher. Additionally, 35.0 percent of the group with no disability have a bachelor’s degree or higher compared to 21.3 percent with a disability.

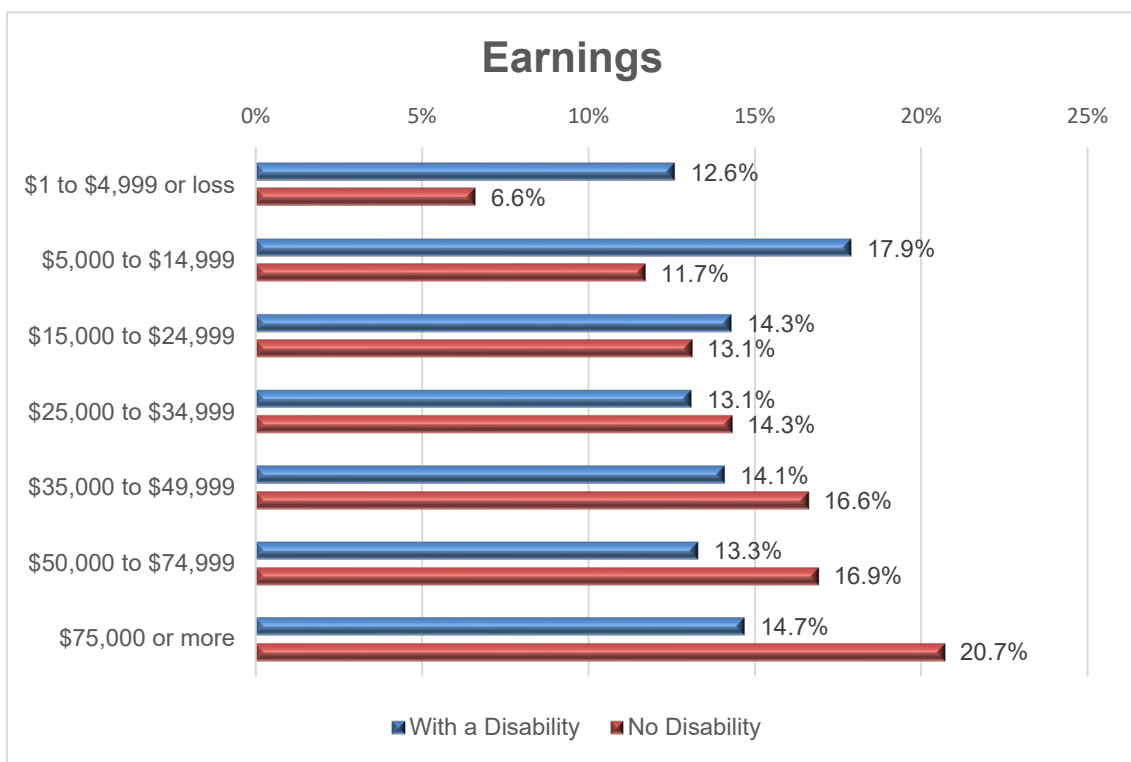

When we compare the latest data to 2021, we see a slight decrease in high school graduation rate but increases in the percentages of people with disabilities who achieved some college or a bachelor’s degree.

Differences in Earnings

It is typical that more highly educated groups earn more. According to the Georgetown University Center on Education and the Workforce, 74 percent of workers with college degrees have good jobs, compared with 42 percent of workers with no more than a high school diploma¹. The gap in education attainment between students with disabilities and students with no disability means a gap also continues to exist in earnings of both groups.

This chart shows the distribution of earnings for both groups and it is clear the higher earning group is the group with no disability.

The median income for Floridians with a disability is \$28,711, versus that of the group with no disability at \$37,783. This can be due to higher education levels, but it could also be attributed to

benefit cliffs that persons with disabilities can face if they are receiving payments from the Social Security Disability program. Earnings often must be kept below certain thresholds to continue to receive monies from many disability programs. The limitation on earnings can be a reason why many persons with a disability are not working or only working part-time.

See Appendix 7 for median income by county for Floridians with a disability. Note this information is not available in this format for all Florida counties.

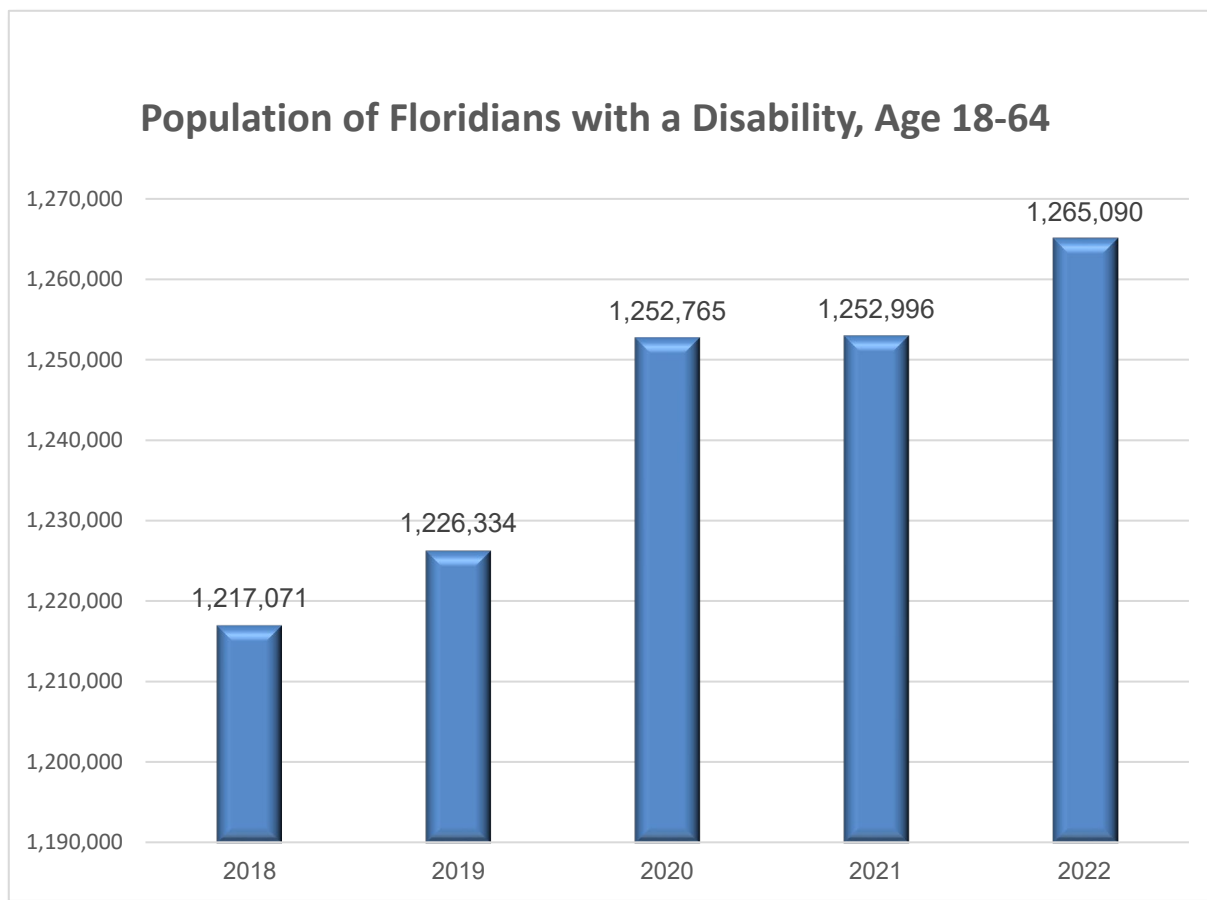

¹ [Georgetown University Center on Education and the Workforce analysis of the US Census Bureau](#), Current Population Survey, 2020–22 (pooled). College degrees include associate’s degrees, bachelor’s degrees, and graduate degrees.

Working Age Floridians with a Disability

The typical age group considered normal working age is 18 to 64 years old. Although some people in this group have retired before age 64, there are also others still working into their 70s and 80s. The [U.S. Bureau of Labor Statistics \(BLS\) projections](#) show that the role of older workers will continue to grow over the next decade.

Adults ages 65 and older are projected to be 8.6 percent of the labor force (those working and looking for work) in 2032, up from 6.6 percent in 2022.²

The working age population of Floridians with disabilities has also been increasing. The chart below shows the number of Floridians with a disability who are age 18 to 64. There was only a slight increase between the 2020 and 2021 five-year average data, but a more significant increase in 2022.

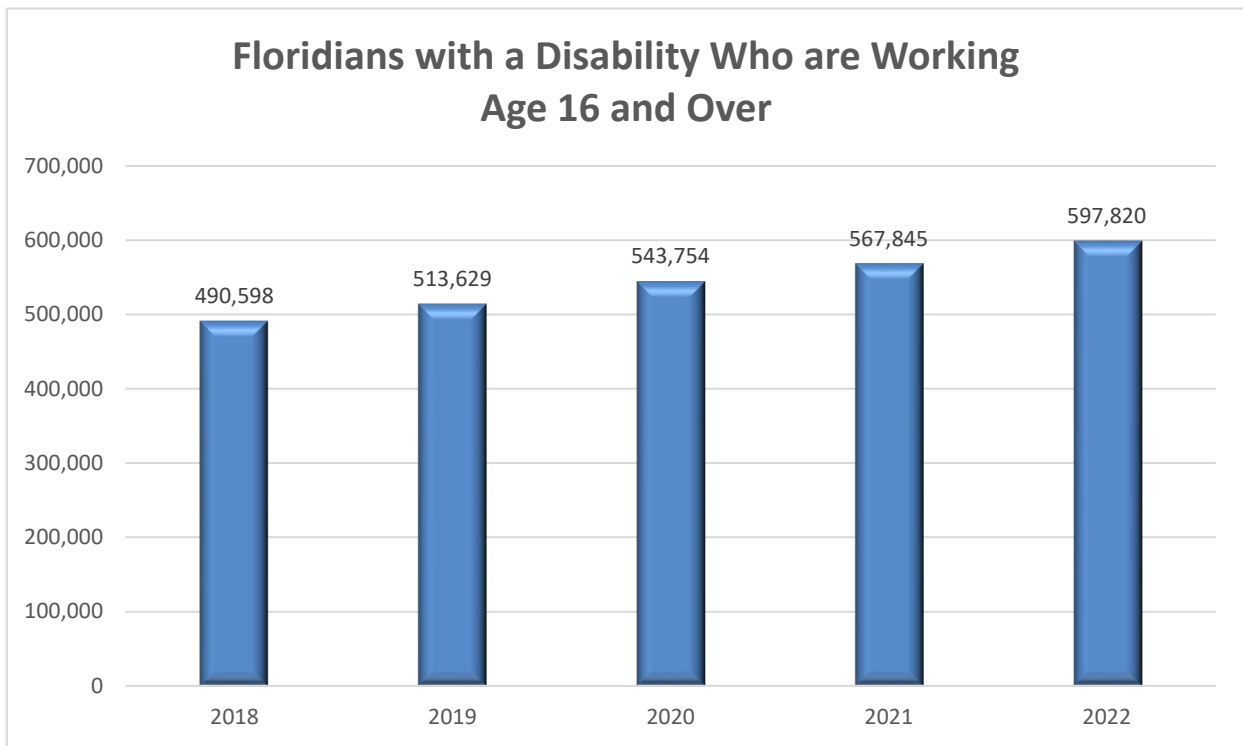

² <https://www.pewresearch.org/social-trends/2023/12/14/the-growth-of-the-older-workforce/#:~:text=The%20BLS%20projects%20that%2021,to%2064%2Dyear%2Dolds>.

Employment of Floridians with a Disability

As the population of persons with disabilities increases, the good news is the number of Floridians with a disability who are employed continues to increase each year. In 2018 there were 490,598 Floridians ages 16 and over with a disability working, and the 2022 data indicates an increase to 597,820 – a 21.8 percent increase over that four-year period.

This substantial increase of more than 107,222 persons with a disability working could partially be due to the tightness in the labor market with job openings exceeding those looking for work.

To view a table showing the number of Floridians with a disability who are employed for each county from 2018-2022, go to Appendix 3.

Differences in Rates of Employment

The number of Floridians with a disability who are working has been steadily increasing. However, there continues to be an important difference between the population with a disability and the overall population in the percentage of people who are working. The most recent Census data shows that 57.1 percent of the population without a disability between the ages of 20 and 64 are employed, versus only 22.1 percent for those with a disability.

For Floridians with a disability, 22.1 percent is a slight increase over 2021 Census data which was 21.4 percent,

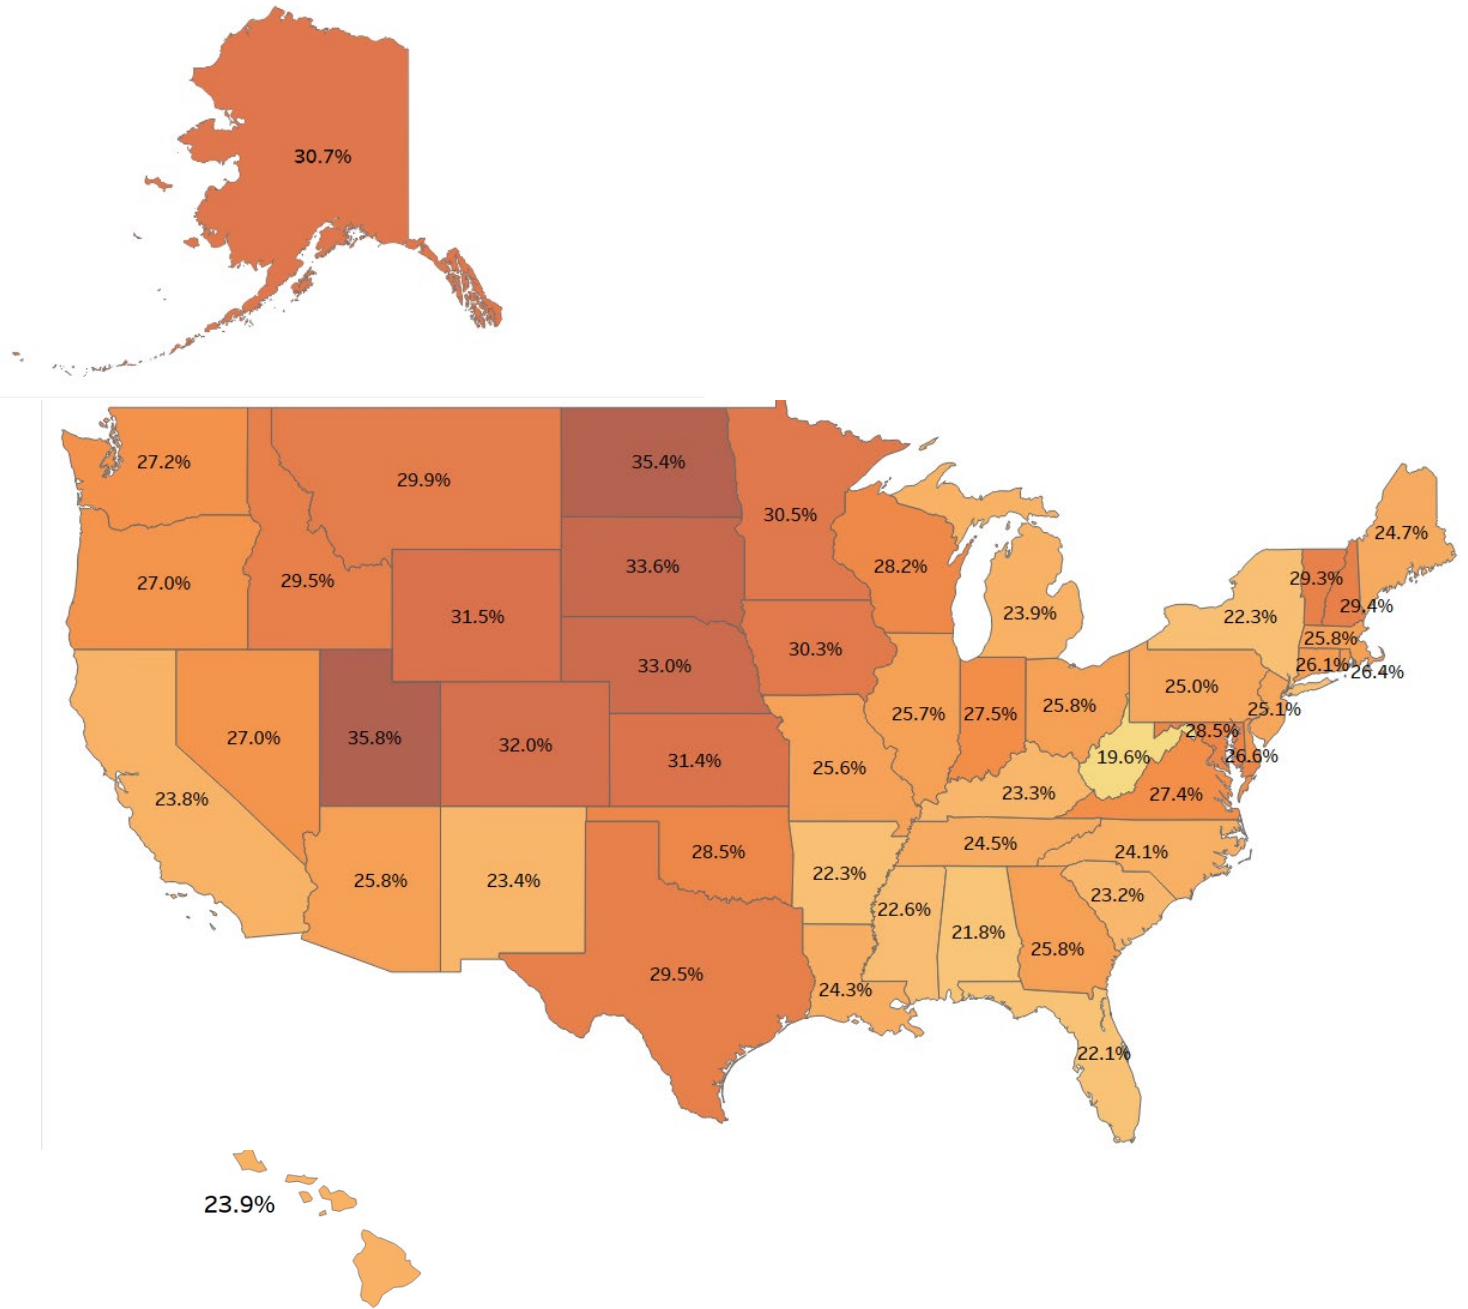

as shown in the second chart.

National Comparison

Florida’s percentage of persons with a disability who are working (22.1 percent) is lower than the U.S. rate of 25.6 percent. Florida’s rate is not substantially different from most of the states in the Southeastern U.S.

Each state’s most recent percentage of persons with a disability who are working is shown on the map on the following page.

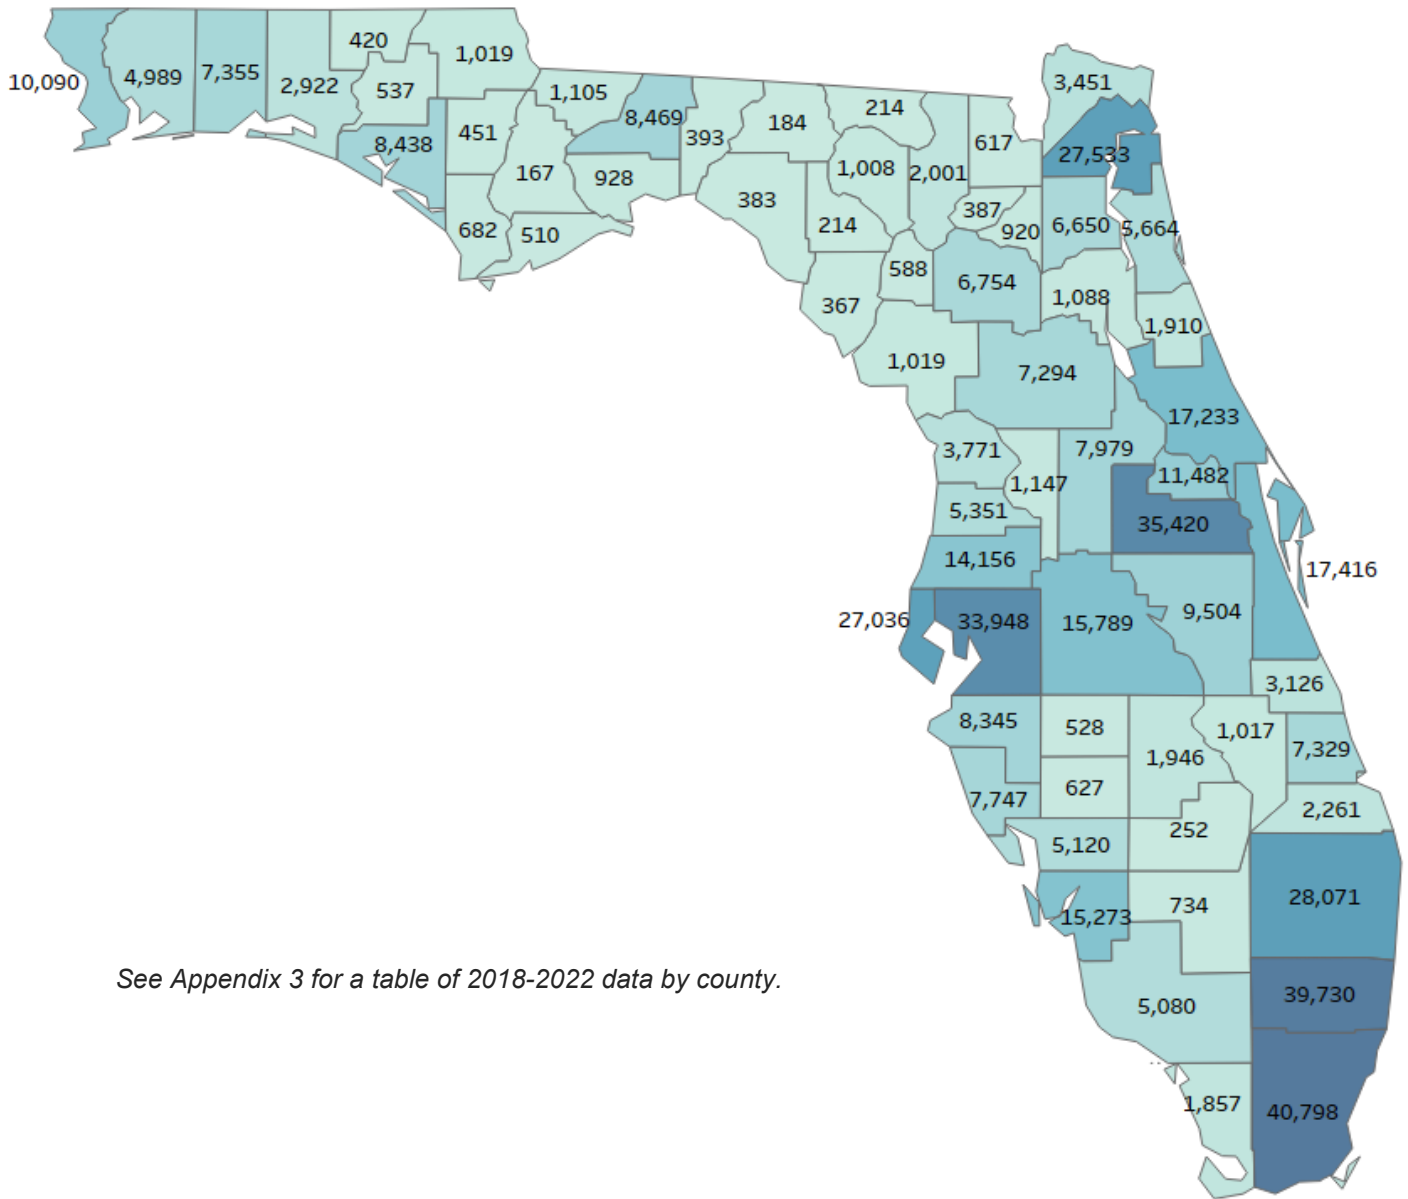

Percentage of Persons with a Disability Who are Working, Age 16 and Older.

Employment of Floridians with a Disability by County

There are currently 597,820 Floridians with a disability who are working, according to the latest available data. The map below shows the number by county of Floridians with a disability who are working. The five counties with the largest number of employed people with disabilities are Miami-Dade, Broward, Orange, Hillsborough, and Palm Beach.

Number of Floridians with a Disability Who are Working, by County (Ages 16 and Over)

See Appendix 3 for a table of 2018-2022 data by county.

Workforce, Employment, and Unemployment Concepts

People who are working or who are jobless are classified into different categories. The following illustrates the differences:

- **Workforce** includes those who are currently working and those who are looking for work.
- **Unemployed** means they are currently not working, but are looking for work.
- **Not in the workforce** means they are not working and not looking for work.

Differences in Labor Force Participation

Although detailed data is not yet available, national data for 2023 is available and shows changes from the 2022 data shown in this report. In 2023, a record 22.5 percent of people with a disability were employed. That is an increase of 1.2 percentage points over 2022.

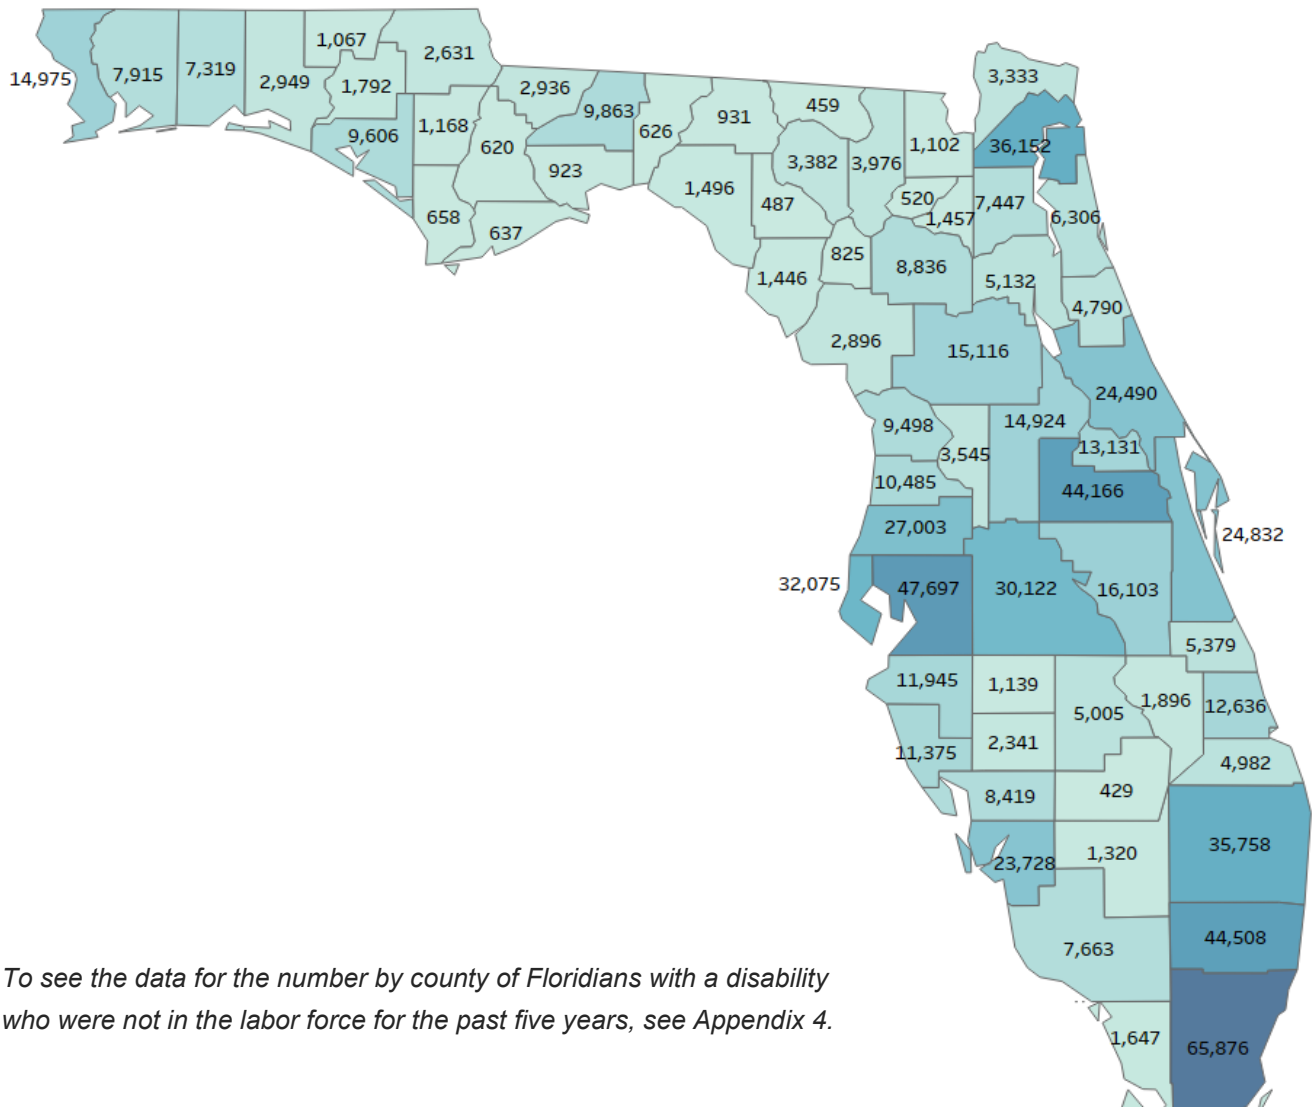

As indicated in the chart below, despite a rise in employment of people with disabilities, a high percentage of people are not in the labor force – 75.8 percent of people with a disability compared to 31.9 percent for those who have no disability. This reflects the ongoing need to raise awareness about opportunities to access this untapped talent pool.

	With a Disability	No Disability
Employed	22.5%	65.8%
Unemployed	7.2%	2.4%
Not in Labor Force	75.8%	31.9%

Floridians with a Disability Not in the Labor Force

The map below indicates the number of persons with a disability, age 16 and over, who are not in the workforce. As previously stated, *not in the workforce* means that they are not working and not looking for work.

In the map below, the counties with more persons with a disability who are not in the workforce are indicated by darker color. There was an average of 715,891 Floridians with a disability who did not work and did not look for work during this time period.

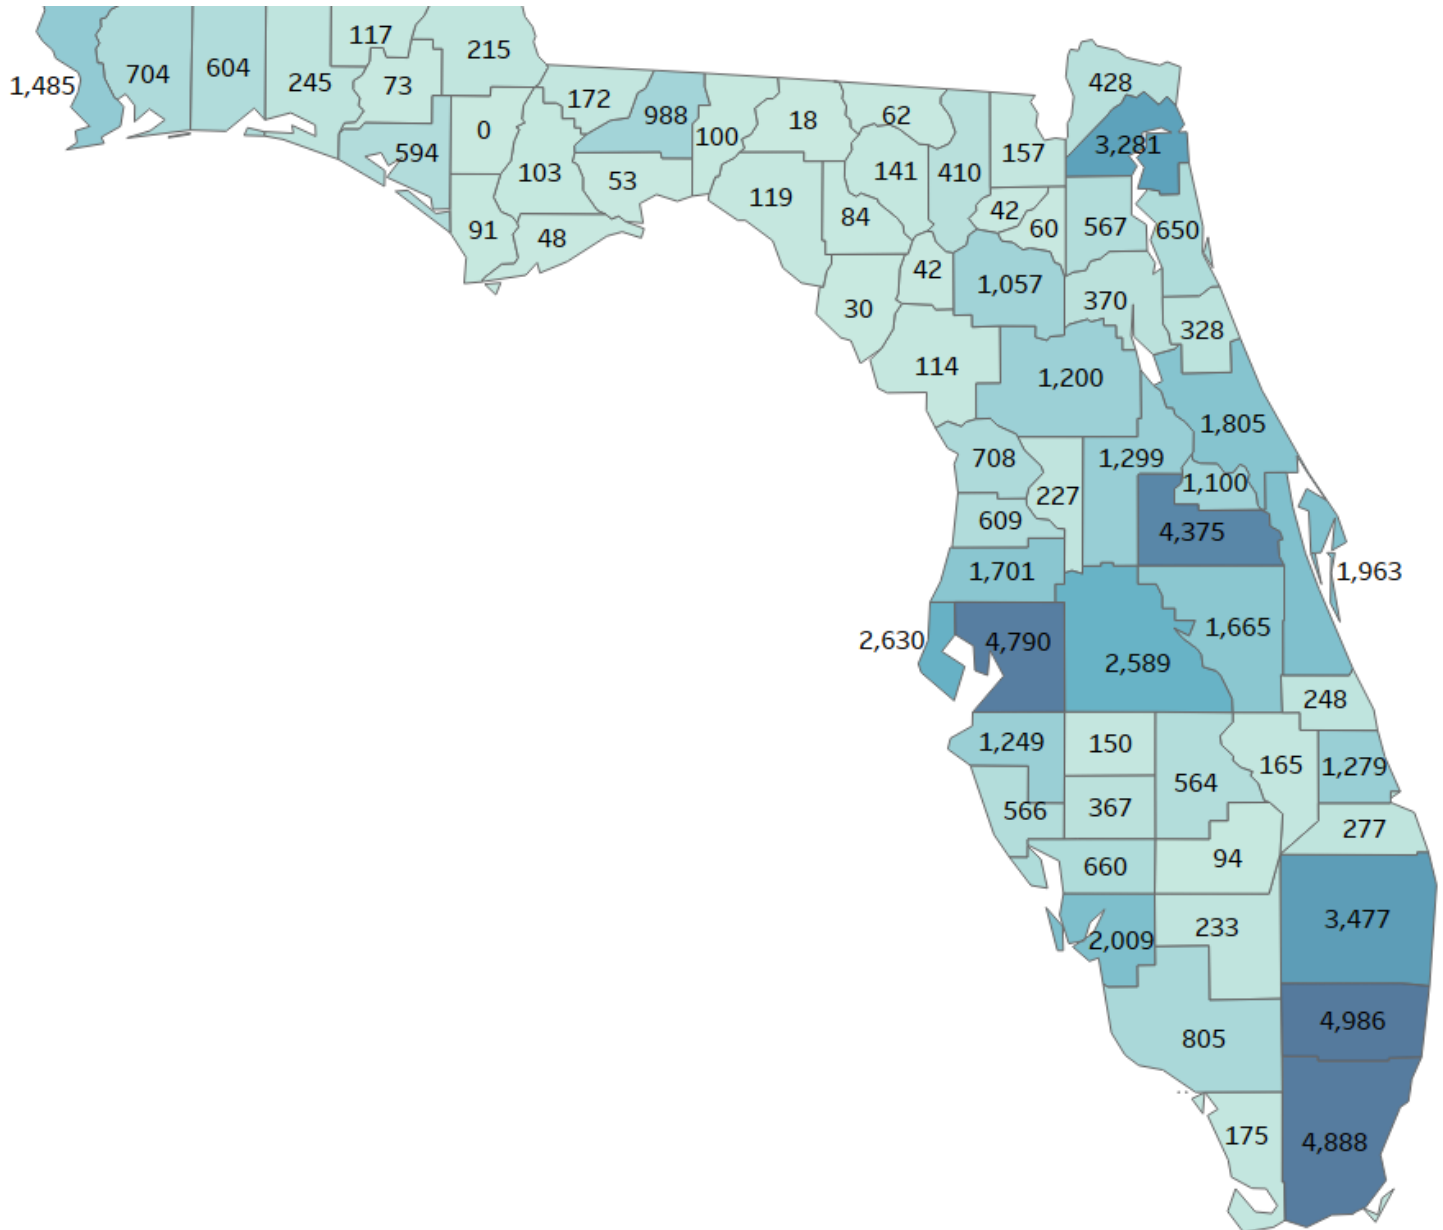

To see the data for the number by county of Floridians with a disability who were not in the labor force for the past five years, see Appendix 4.

Floridians with a Disability Who are Unemployed

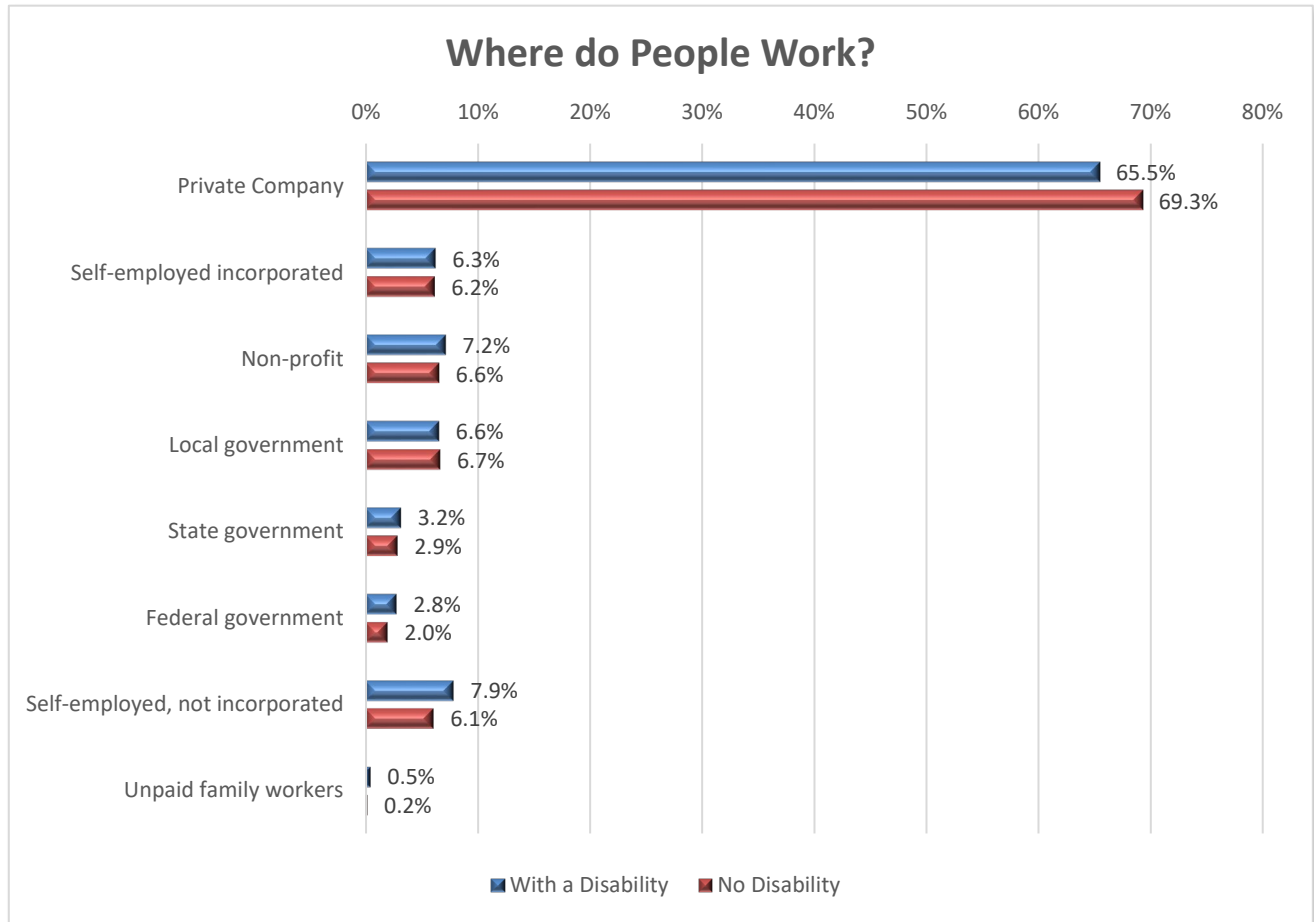

Below is a map of the most recent data on the number of Floridians who are not working but who are looking for work. For the county data for the past five years on the number of persons with a disability who are unemployed, see Appendix 6.

Number of Persons with a Disability Who are Unemployed – 2022 Data

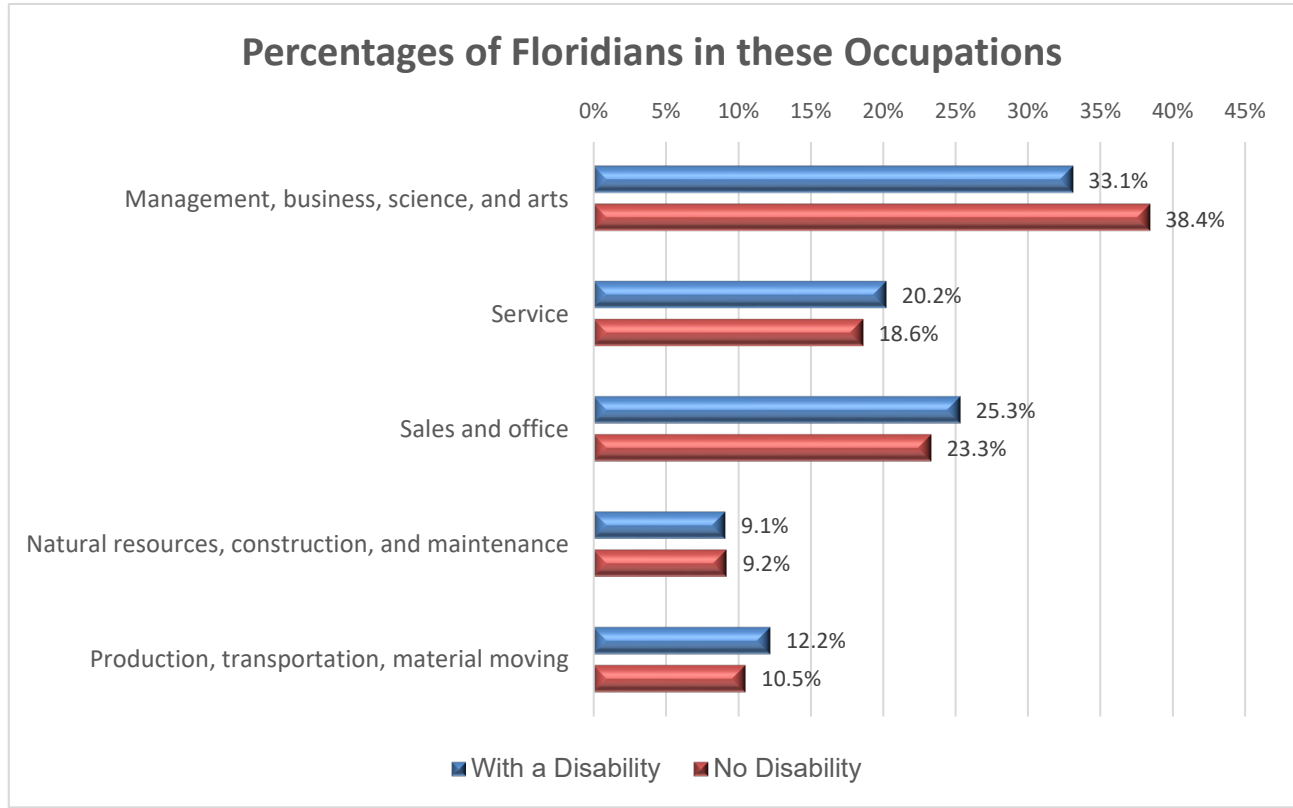

Different Types of Organizations Where People Work

When we look at the difference in the types of organizations for which Floridians with a disability work compared to individuals with no disability, the data show that persons with a disability are more likely to work for a non-profit, a government agency, or to be self-employed in a non-incorporated business.

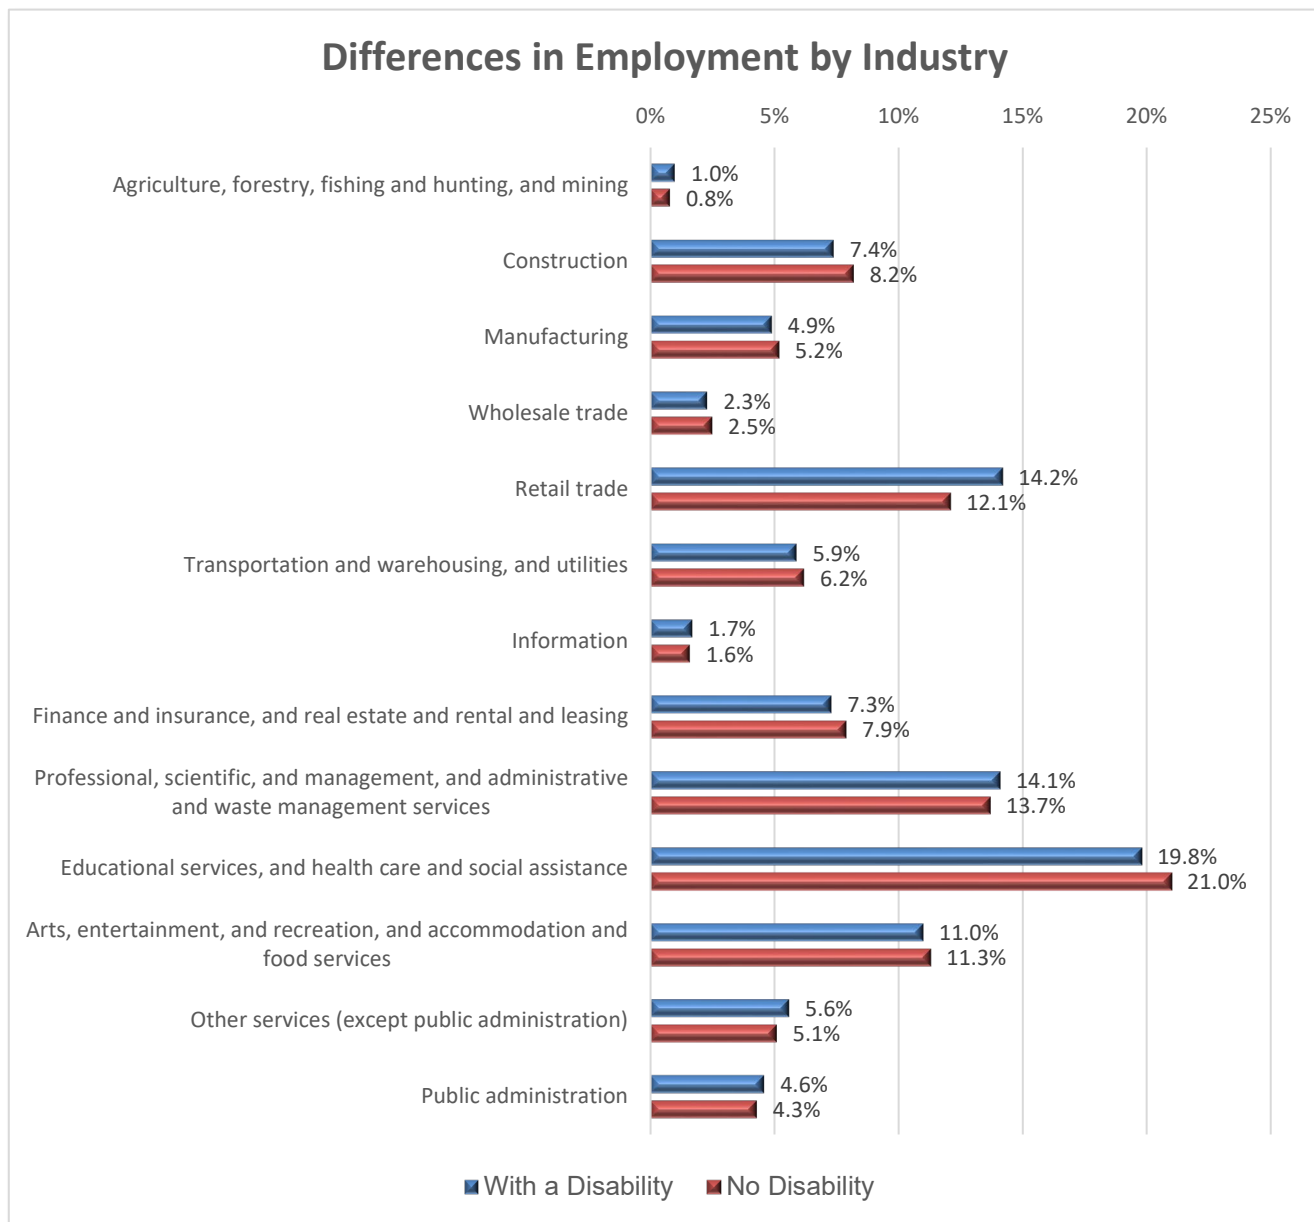

Differences in Occupations

When we look at the occupations of persons with a disability in Florida, they are less likely to be in the Management, Business, Science, and Arts category than those with no disability. They are also as likely or more likely to be in all the other occupation categories.

Differences by Industry

When broken down by industry, persons with a disability are slightly more likely to be in services and retail trade than those indicating no disability. For most of the categories, there is only a small percentage difference between the two groups. Persons with a disability are more likely to work in retail trade, public administration, and “other services,” and less likely to work in the Financial Activities and the Education & Health Services industries.

This report shows where Floridians with a disability live and work, as well as some of the details about their education, employment and income. What is clear is there are significant differences between persons with a disability and those who do not have a disability.

By examining the data that impact Floridians, we gain insight into the discrepancies that affect Florida's workforce and local economies. Improving educational attainment among students with disabilities is a foundational improvement that will have a cascading effect, potentially improving the employment of Floridians with disabilities and their earnings levels.

With a growing population and an increasingly complex economy, it is crucial to ensure Floridians with disabilities have the opportunity to gain the education and training needed to continue to strengthen this important talent pool.

Contact The Able Trust

As we track this important data, The Able Trust youth programs are working to increase rates of high school graduation, postsecondary enrollment and postsecondary attainments for students with disabilities. Using a research-based foundation, we have been supporting students with disabilities for close to 30 years.

To learn more about The Able Trust, our youth programs, and find out how you can get involved, visit www.abletrust.org.

Appendix 1: Questions Used in the Survey to Estimate the Number of Persons with a Disability on Current Population Survey (CPS) by U.S. Census Bureau

The CPS uses a set of six questions to identify persons with disabilities. A response of “yes” to any one of the questions indicates that the person in question has a disability. The disability questions appear in the CPS in the following format:

This month we want to learn about people who have physical, mental, or emotional conditions that cause serious difficulty with their daily activities. Please answer for household members who are 15 years old or over.

1. Is anyone deaf or does anyone have serious difficulty hearing?
2. Is anyone blind or does anyone have serious difficulty seeing even when wearing glasses?
3. Because of a physical, mental, or emotional condition, does anyone have serious difficulty concentrating, remembering, or making decisions?
4. Does anyone have serious difficulty walking or climbing stairs?
5. Does anyone have difficulty dressing or bathing?
6. Because of a physical, mental, or emotional condition, does anyone have difficulty doing errands alone such as visiting a doctor’s office or shopping?

Labor force measures from the CPS are tabulated for persons aged 16 and older.
